Profile

Enthusiastic and tech-savvy student pursuing a degree in Computer Information Systems, eager to apply problem-solving skills in a dynamic team environment. Experienced in analyzing technical issues, documenting resolutions, and managing escalations. Adaptable to diverse industries and technologies, with a strong ability to learn quickly and meet deadlines.

Skills

- **Programming Languages:** Java, C++, HTML, and CSS
- **Databases:** RDBMS (MSSQL, MySQL, PostgreSQL), NoSQL (MongoDB)
- **Critical Thinking:** Demonstrated ability to use objective reasoning in assessing problems and determine solutions.
- Proficient in data analysis tools and software (MS Office Suites, PowerBI)

Problem Solver: Assisted the Sales and Marketing team at Leadway Assurance to resolve a memory issue with the lead generation software contributing to operational efficiency and better lead conversion.

- **Team player:** Always willing to learn, work great with other people encourages and support coworkers and open to feedback.

Education

Bachelor of Computer Information Systems

2022 - Present

Mount Royal University

Calgary, AB

- Major – Computer Information Systems
- Anticipated Graduation 2027

Relevant Projects

TOY STORE SYSTEM

- Leveraged Java to develop a fully functional toy store system for purchasing toys with the ability to display attributes of the toys during decision making. The toy store was deployed and ran on the university shared Linux environment.

WEB DESIGN SYSTEM

- Designed and developed a custom data storage and retrieval website used as a document management system complete with roles and privileges for users. The site was built using HTML and CSS.
- Developed and maintained a personal portfolio web site for users to access and interact with development projects using advanced web design methods showcasing knowledge in user experience design. Link to my [portfolio](#).

Work Experience

Junior Developer (Intern)

2021 – 2022

Leadway Assurance

Key Achievements and Responsibilities

- Designed and maintained a client management system using Python and SQL to organize and track client's interactions and potential clients, improving data accessibility and team efficiency.
- Debugged and resolved user software issues within the company's internal application which enhanced its features and optimized overall performance.
- Collaborated with cross-functional teams to develop and document new features of the insurance core system, using SQL and C++, while adhering to the company coding standard.
- Delivered a presentation to a large audience with effective communicative skills, simplifying complex technical concepts with the aid of visuals and use of live demos.

Volunteer Experience

Program Co-ordinator/IT

September 2024 – Present

Maple Life Foundation, Canada

Key Achievements and Responsibilities

- Lead idea generation and supported the planning and execution of approved initiatives for immigrant youths in Canada through mentorship and empowerment.
- Manage database, such as MySQL, to track participants progress and records to ensure effective program evaluation and reporting.
